IMPORTANT NOTICE

Newbury Street

Short-Term Water Disruption
Overnight September 27-28, 2011

During the scheduled water work last night, a gate valve on Fairfield Street at the intersection of Commonwealth Avenue developed a leak. A temporary water main shutdown is needed to repair this valve.

In an effort to minimize water disruption, the contractor will perform the shutdown during the early morning hours from 12:00 AM to 2:00 AM. It is anticipated that the valve can be repaired in two hours. In the event the valve needs to be replaced, the contractor will do so. This work may take up to five hours to complete.

The shutdown will be tonight Wednesday, September 28, 2011.

The shutdown will affect buildings with services fed from Fairfield Street, between Commonwealth Avenue and Newbury Street.

Please contact Steve Johnson, BWSC Project Engineer, immediately with any questions or concerns about the work. He can be reached at 617-989-7453. Our field staff, Sunil Patel and Torrey LeCornec, will coordinate directly with customers that will be impacted by the water main shutdown. If you are not sure where your service is fed from, please contact Sunil Patel at 978-390-4970.

We appreciate your patience and understanding as we complete this complex project.

Thank you.
